Information Technology is indispensable in both our work and private lives. Growing demands on the part of users make IT projects ever more complex while at the same time, the know-how necessary to manage them is increasingly spread out across the world. This bachelor's degree program was specifically designed to address the challenges associated with a digitalized future.

Do you enjoy working with people? Are you interested in information technologies and digital transformation, but also keen to learn about other cultures? Then this fully taught in English, internationally focused degree program in International IT Management is for you.

Program content

Graduates of this degree are qualified specialists who have the skills to manage IT and digitalization projects in an international, interdisciplinary and intercultural environment. Students learn to initiate, supervise, actively participate in, and successfully complete ambitious digitalization and IT projects in complex situations while displaying cross-cultural awareness. To acquire the related skills, students spend two mandatory semesters abroad as part of the curriculum. In light of ongoing and increasing globalization and

the associated need for international collaboration, this degree offers a future-proof professional perspective.

Your benefits at a glance

Customizable program

About a third of the program content is set by the student during the two mandatory semesters abroad.

Choosing a major

Specialize by selecting a major in Technology or Digital Business Engineering during your semesters abroad.

Professional fields

Depending on your personal preference and on the major you choose, your career will most likely kick off in a more technical field (e.g., as an IT application engineer, IT solution architect, IT security analyst) or in the field of digital transformation (e.g., as an AI developer, cloud engineer, BI analyst, digital marketing manager, business development manager).
